DETAILED ACTION

This is a Final Rejection for application no. 10/085,616 in response to the amendment filed on March 30, 2006 wherein claims 1-20 are presented for examination.

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2, 5, 6, and 16-18 are rejected under 35 U.S.C. 102(b) as being anticipated by 'A Self-Governing Rate Buffer Control Strategy for Pseudoconstant Bit Rate Video Coding' by Chen et al.

[claims 1, 2, 15, 16, and 18]

Chen teaches a method and system for making a mode decision in video coding comprising:

Collecting a first portion of video data (intraframe);

Labeling the first portion of video data with an optimal mode (quantizer);

Identifying at least one feature of the first portion of video data

corresponding to the optimal mode (INTRABITS);

Application/Control Number: 10/085,616

Art Unit: 2621

Constructing a probabilistic model based on the at least one identified feature (EB_i); and

Page 3

Making a mode decision for a second portion of the video data based on an application of the probabilistic model to the second portion of the video (equations 4 and 5) (Section: III Self-Governing Rate Buffer Control Strategy. Pages 53-55).

As required by claim 2, Chen teaches the collecting a first portion of video data includes collecting a sample of the video data (a first frame of the current GOP).

[claim 5]

As shown by equation 5, Chen teaches the calculating a likelihood ratio for a unit of the second portion of the video using a value of the feature. Then a quantizer is selected to be true and made the mode for the second portion (SGOP), as shown by equation 4 (Page 54-55).

[claims 6 and 17]

The quantizer mode selection has a direct relationship with if the frame is skipped or coded as Chen teaches the system contains an Underflow and Overflow-Alter State. This Alter State is triggered on a quantizer allowing the encoder to provided too many bits or not enough bits where in the system will opt not to code any data in an overflow state (Section: Underflow and Overflow-Alert. Page 55).

Allowable Subject Matter

Claims 3-4, 7-14, 19 and 20 are allowed.

Application/Control Number: 10/085,616

Art Unit: 2621

The following is a statement of reasons for the indication of allowable subject matter:

The claims are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose a method or apparatus for coding wherein in the coding is based on the identifying a feature by defining at leas one training feature vector and its cost relating to a unit of the first portion of video data and defining a training feature space containing the feature vector.

The closest prior art as shown above teaches the requirements of a method of making mode decisions but fails to particularly teach the specific method of identifying a feature as claimed. This feature taken with the others in the claims overcome the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erick Rekstad whose telephone number is 571-272-7338. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on 571-272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
